Nurlan Osmonaliev - Frontend React JS Developer

Bishkek, the Kyrgyz Republic, GMT+6

osmonalievnurlan97@gmail.com, +996707255203, Telegram, WhatsApp, Linkedin, Portfolio

WORK EXPERIENCE

Neobis – Frontend React JS Developer   12/2023 – present

- SmartTale - a marketplace with a Kanban functionality similar to Jira
  - Worked in a team of 5 members, including 3 frontend developers, one backend developer and the Product Manager.
  - Developed multi-step and token-based user registration and authentication with email and phone verification using React, Formik, Yup, and MobX.
  - Created responsive and dynamic layout with HTML, CSS, SCSS, and TypeScript.
  - Used Git for version control and resolved conflicts during merges on GitLab and GitHub.
  - Managed tasks and tracked progress using Jira ensuring timely completion of sprints.
- CooksCorner - a website designed for cooks to share their recipes
  - Worked in a team with a backend developer.
  - Developed the frontend part from scratch using React JS, Redux Toolkit, Formik, and Yup.
  - Integrated API for user registration, login, and viewing recipes and profiles.
  - Developed search logic with debounce to optimize performance.
  - Used Git for version control, pushing code to GitHub.
- Auth - a website designed for user registration and authentication, ensuring data accuracy through validation checks including email verification and password complexity rules
  - Worked in a team with a backend developer.
  - Developed the frontend layout using HTML, SCSS and integrated the API into the project.
  - Implemented token-based authentication and registration with functionality to verify the confirmation code sent to the email.
  - Implemented email and password validation during registration.
  - Used Git for version control, pushing code to GitHub.
- NeoTour - a travel app to search for tours with booking functionality
  - Worked in a team of 3 developers, including backend and IOS developers
  - Developed the frontend using React JS, Redux toolkit, Formik, Yup, and styling libraries.
  - Integrated API for viewing tours and booking desired tours for a specified number of people.
  - Used Git for version control, pushing code to GitHub.
