WORK EXPERIENCE

Neobis – Junior Javascript Frontend Developer   12/2023 – present

- Projects and Team Collaboration:
    - Worked on different projects with teams ranging from 2 to 6 members.
    - Built modern web applications using Javascript and Typescript. Developed user interfaces using React, ensuring high quality and responsive design. Managed application state with Redux and MobX, ensuring robust and predictable application behavior.
    - Regularly used Git for version control, pushing code to GitLab and GitHub and gained experience in resolving conflicts during git merge to ensure smooth collaboration and code integration.
    - Managed tasks and projects using Jira, effectively tracking progress and ensuring timely completion of sprints and milestones.
    - Acted as a mentor in the Neobis Club, providing guidance and training to a new programmer and sharing knowledge on frontend technologies.
- Key Contributions:
    - Actively developed features for user registration and authentication, including a multi-step registration and authentication process with email and phone number availability checks using React, Formik, Yup and MobX. A confirmation code was sent to a user via email and the user could only complete registration or authentication after entering this code, with an option to resend the code if needed. The authentication process was token-based and the tokens were stored in the cookies.
    - Created responsive and dynamic user interfaces, ensuring high quality and user-friendly designs with HTML, CSS, SCSS (including CSS Grid and Flexbox) and Javascript/ TypeScript for interactive components in React.
    - Developed the frontend part of a tour booking project using React JS, Redux toolkit, Formiik, Yup and styling libraries. Users could view various tours offered on the website, select the desired tour, fill in the necessary fields in the form, and book the tour for a specified number of people.
    - Developed logic for searching and retrieving specific data from the website using debounce to optimize search performance.

EDUCATION

J.Balasagyn Kyrgyz National University - Bishkek, Kyrgyzstan   2015 - 2020

Faculty for Foreign Languages - Translation and Translation Studies

TECHNICAL SKILLS

Javascript, Typescript, HTML, CSS, SASS, React, Redux Toolkit, MobX, Formik, Yup, Git, Trello, Jira
